

AutoGrid® comsmart in a new outfit

The AutoGrid® comsmart system gets a new look!

The new case offers decisive advantages over to the previous model. The revised packaging is very **robust**. The contents, consisting of AutoGrid® comsmart measuring head, laptop, calibration plate, all necessary cables and other components, are thus optimally protected. The trolley case can be easily taken along on air travel, either as a robust, well-protected piece of luggage or as hand luggage due to its **compact dimensions**.

The **high-quality workmanship** and **attractive design** of the case speak for themselves. Thanks to the long telescopic rod, which can be easily pulled out when needed, you can pull the case behind you **quite comfortably**.

The new housing of the AutoGrid® comsmart system has a high-quality finish and offers sophisticated functionality. If you are interested in our products or if you have any questions, don't hesitate to contact our AutoGrid® sales team:
